

Munehito Shoda received the PhD Degree in Science from the University of Tokyo, Japan in 2019. After working as a JSPS PD fellow in National Astronomical Observatory of Japan, he has been working as an assistant professor in the University of Tokyo since 2022 March. His research interests include the large-scale numerical simulation of the solar/stellar wind, solar/stellar coronal heating and the long-term evolution of the whole solar/stellar system. The PhD thesis entitled “Fast solar wind driven by parametric decay instability and Alfvén wave turbulence” has been highly evaluated, including the winning of PhD Prize from the International Astronomical Union (IAU).
