

Maya Mizuno received her Ph.D. degree in Engineering from Tohoku University in 2006 while she was working as a unit researcher at RIKEN, where she researched on millimeter wave and terahertz spectroscopy applications. In 2006, she joined the Applied Electromagnetic Research Institute (now the Radio Research Institute), the National Institute of Information and Communications Technology. She has been researching on terahertz dielectric property measurement techniques in the research field of electromagnetic compatibility. She is currently a senior researcher in the Radio Research Institute. Her research interests include mechanisms of interactions between terahertz waves and biological substances at molecular, cellular, and tissue levels. She served as chair of the technical committee on Photonics-applied Electromagnetic Measurement of the IEICE in FY 2018-2019. She is a member of the ICNIRP Scientific Expert Group.
